

EDUARDO GREGÓRIO WAGNER, 23 years

Mid-Level Full Stack Developer | JavaScript, TypeScript, React, Next.js | Node.js, PostgreSQL | Web, Mobile & Desktop Irineópolis, SC, Brazil | (47) 99623-9751 | eduardo gwagner2003@gmail.com | linkedin.com/in/eduardowagner03 | github.com/EduardoWagner03 | eduardowagner.com.br

PROFESSIONAL SUMMARY

Bachelor's degree in Software Engineering with 4 years of hands-on experience in Full Stack development, with a strong focus on Frontend and modern application architecture. Specialist in the JavaScript/TypeScript ecosystem, working mainly with React, Next.js, and Node.js to build high-performance, scalable, product-oriented applications.

Experienced across the full software development lifecycle, from requirements gathering, prototyping, and architecture design to development, API integration, testing, deployment, and production maintenance. Hands-on experience with PostgreSQL, Supabase, Firebase/Firestore, Redis, Google Cloud, Electron.js, PWAs, and multi-tenant SaaS architectures, with a focus on performance, infrastructure cost optimization, and caching strategies.

As co-founder and Software Engineer at StreamDev, I work directly on translating business requirements into digital products, leading technical decisions and building solutions for Web, Desktop, and systems integrated with external payment providers, ERPs, tax/invoicing systems, maps, and communication services.

TECHNICAL SKILLS & COMPETENCIES

Frontend: TypeScript, JavaScript, React, Next.js, React Router, HTML5, CSS3, Tailwind CSS, Bootstrap, Radix UI, Framer Motion, Chart.js, Recharts, Vite, PWA (Service Workers, manifest), Web Push (VAPID), and responsive, accessible interface development.

Backend: Node.js, Express.js, EJS (SSR), Medusa.js v2 (headless commerce), Prisma ORM, REST APIs, Zod, Multer, Pino, node-cron (scheduled jobs), rate limiting, and caching.

Databases & Caching: PostgreSQL, Supabase, Firebase/Firestore (security rules and composite indexes), Redis (Upstash), in-memory and layered caching (node-cache), server-side pagination, and data modeling with UML and ERD.

Cloud & Infrastructure: Google Cloud Platform, Cloud Run, Docker, Cloud Build, GitHub

Actions, asynchronous messaging (Pub/Sub), Secret Manager, Firebase Hosting, Cloudflare, Workload Identity Federation, staging and production environments, performance and cost optimization, and SaaS application architecture.

Desktop & Mobile: Electron.js, cross-platform applications, and working knowledge of React Native.

Integrations: Mercado Pago, Bling ERP (OAuth2), Focus NFe, Asaas, Melhor Envio, Jadlog, Evolution API, Mapbox, ViaCEP, and third-party API integrations.

Documents & Media: PDF and report generation (jsPDF, html2pdf, html2canvas), digital signature on canvas (signature_pad), file upload and processing with client-side image compression.

Security & Quality: LGPD (Brazilian data protection law), role-based access control, 2FA, authentication middleware, webhook signature validation, data validation, audit logs, and automated testing with Jest, Supertest, and Testing Library.

Tools & Methodologies: Git, GitHub, Jira, Scrum, monorepo, npm workspaces, CI/CD, and code review.

Specialties: multi-tenant SaaS architecture, e-commerce, management systems, IoT, real-time systems, performance optimization, and business-requirement-driven development.

PROFESSIONAL EXPERIENCE Software Engineer & Co-Founder — StreamDev January 2026 – Present

Technical leadership and digital product development at StreamDev, directly involved in the architecture, development, and evolution of SaaS systems and commercial platforms.

Bloco3D Project — E-commerce specialized in 3D technology

Led the architecture and full-stack development of the platform (Next.js 15, React), from the storefront to the headless backend.

Serverless infrastructure on Google Cloud Run with Docker and CI/CD via Cloud Build, including separate staging and production environments.

Asynchronous webhook processing with GCP Pub/Sub and Redis (Upstash), ensuring independence and preventing duplicate payment processing.

Integrations with Mercado Pago (checkout, PIX, and credit card), Bling ERP via OAuth2 (invoice synchronization), and Melhor Envio/Jadlog for shipping cost calculation and label generation.

Supabase (PostgreSQL, authentication, and storage) and custom admin dashboards for managing products, orders, coupons, and featured items.

Security and compliance: 2FA, webhook signature validation, audit logs, and LGPD compliance.

Automated test suite with Jest integrated into the CI pipeline, covering payments, tax integrations, and business rules.

MenuDigital Project — SaaS for Digital Menus and Restaurant Management

Development of a multi-tenant SaaS platform for restaurants and delivery, covering both the merchant side and the Super Admin panel, with multiple stores in commercial operation.

Implementation of the complete order flow, from the customer browsing the menu via link or QR code to payment, processing, and real-time tracking.

Multi-tenant architecture with data isolation between stores and enforced access control.

Financial and tax integrations: Mercado Pago (PIX, payment split between store and platform, commissions and recurring subscriptions), Focus NFe (automated NFC-e invoice issuance with email delivery), and Asaas (NFS-e invoice issuance for StreamDev).

- Customer communication via Evolution API (WhatsApp), Web Push notifications, and real-time updates with Socket.IO.
- Integration with Mapbox and ViaCEP for address geocoding and visual definition of delivery areas and radii.
- Development of the Super Admin panel (stores, plans, subscriptions, billing, onboarding, discovery phase, support, and platform health monitoring) and merchant-side admin features (products, categories, hours, coupons, payment methods, reports, and staff).

Stack: React 19, React Router 7, Tailwind CSS, Radix UI, Framer Motion, Recharts, Node.js, and PostgreSQL, with JWT authentication, bcrypt, 2FA, Zod validation, rate limiting, caching, and logging.

Monorepo with npm workspaces and CI/CD via GitHub Actions, Firebase Hosting, and Google Cloud, with separate staging and production environments, automated deployment, and release versioning.

Full Stack Developer — Projects & Consulting

January 2022 – December 2025 Development of systems for different segments, participating in every stage of the software lifecycle, from requirements gathering and

modeling to development, testing, and delivery.

FlowTime — Management system for a podiatry clinic, evolving into a SaaS (Technical Co-Lead and Frontend Lead)

- Server-rendered web application (Node.js, Express, and EJS) and a desktop version in Electron.js, originally developed as a capstone project (TCC) and later delivered for commercial use.
- Layered backend architecture (router → controllers → services), with a custom authentication system and role-based access control.
- Firebase/Firestore as the system's foundation (Authentication, Storage, security rules, and composite indexes), with a documented process for deploying indexes to production and use of the Firebase Admin SDK on the backend.
- Performance and cost optimization: layered in-memory caching and dedicated server-side caching, reducing Firestore reads and Google Cloud Run operating costs.
- Full PWA with service worker and manifest, Web Push notifications (VAPID) with subscription management, and scheduled jobs with node-cron (automatic reminders, patient birthdays, and data cleanup).
- Scheduling modules with time zone handling (moment-timezone), medical records and intake forms with digital signature on canvas and PDF export (jsPDF, html2pdf, html2canvas), attachment management with Multer upload and client-side image compression, plus cash flow and analytical reports with charts (Chart.js/Recharts).
- Subscription and plan system, message templates for patient communication, and frontend build with Vite.
- Responsible for UML/ERD modeling, Figma prototyping, and system architecture design.
- Currently undergoing architectural reorganization to become a multi-tenant SaaS, presented as future work in the capstone (TCC) defense.

ThermalTech — IoT platform for air-conditioning monitoring

- Led development starting in the second year of the undergraduate program.
- Participated in defining the architecture and developing the equipment monitoring solution.
- Applied IoT, monitoring, and energy-efficiency concepts.

TonerTrack — Printer management system

- Conceived and developed a system for managing printers in educational institutions.
- Developed the application's architecture and core features.

Auto Pintura Luizinho — Institutional landing page for an auto body shop

- Full development of a one-page institutional website for an auto body, painting, and detailing business, focused on capturing local customers and generating quote requests.
- Frontend built with semantic HTML5, CSS3, and Tailwind CSS, with mobile-first responsive design, custom visual identity (Google Fonts), and conversion-oriented layout.
- Interactivity built with vanilla JavaScript: scroll-triggered entrance animations with IntersectionObserver, high-performance transitions with requestAnimationFrame, smooth scroll navigation, mobile menu, testimonials section, and accordion FAQ.
- Integrations with WhatsApp (wa.me deep link for instant quote requests), Google Maps, and Instagram.
- SEO and performance: descriptive meta tags, theme-color, lazy-loaded images, font preconnect, and a lightweight static page with no framework dependencies, ensuring fast load times.
- Accessibility: ARIA attributes, adequate contrast, and keyboard navigation.

EDUCATION

Bachelor's Degree in Software Engineering — UGV University Center | 2022 – 2025

Throughout the program, I led multiple development teams on practical projects, applying agile methodologies and participating in the full software lifecycle, from requirements gathering, modeling, and architecture design to development, testing, and deployment. Experience with technical leadership, requirements definition, UML/ERD modeling, Full Stack development, and Scrum.
